

## **One Call Does It All: 303.757.0899**

### ***Enduring Energy***

At enduring energy we want to make installing your sustainable energy system as simple and efficient as possible. We handle the details so you won't have to.

### ***Personalized Design***

From simple to complex, we work with you to design the sustainable energy system that fits your needs and budget. We supply wind and solar energy products for off-grid and on-grid. Systems can have battery back-up or be gridlocked. We can handle the whole process, from the engineering, to obtaining permits, to installation, monitoring, and technical support.

### ***Choosing Products That Work For You***

Enduring Energy works with a wide range of manufacturers. This gives us the flexibility to choose products that best work for you. We understand the energy market and keep abreast of the latest technological developments.

### ***Obtaining Permits***

As part of the complete installation package, we will guide you through and assist with all the zoning and building requirements, such as obtaining permits and dealing with regulatory idiosyncrasies. For the inexperienced, this in itself can sometimes prove to be the greatest barrier. Our experience with the process allows us to do what we do best and lets you sleep soundly.

### ***Complete Installation***

We provide the skills, experience, and products to handle both home and commercial installations - in the city or "at the end of the road". If any construction or building modification is needed, we can pull together all of the resources to get the job done so that you don't have to juggle multiple contractors.

### ***Xcel Energy Rebates - Federal Tax Credits***

Xcel Energy provides substantial rebates through the end of 2007. These rebates, coupled with the current Federal Tax refunds, makes this the best time to install a sustainable energy system for your home or business. The rebates and credits can pay up to 1/2 the cost of the system. These programs end at the end of 2007. Call today to make an appointment to discuss energy system that is right for you.

### ***Monitoring***

One of the optional services that we at Enduring Energy offer is on-going system monitoring. You will receive monthly reports detailing how much electricity your system generates and how this saves on your utility bill. Also, the system reports on the health of your equipment. If something malfunctions we are automatically informed, enabling us to nip problems in the bud.

### ***Technical Support***

Enduring Energy offers on-going technical support while you are getting familiar with your system. We also offer extended warranty and on-going maintenance programs. If ever you have a problem with any of the systems installed by us, we will respond as quickly as possible to your call and correct the problem in order to ensure that your sustainable energy systems are functioning at their most efficient capacity.

### ***Educational Outreach***

For us at Enduring Energy, sustainable energy is more than a business; it's a way of life. We do talks and seminars about how the technology works, how you can take advantage of it, and what you can do to increase your energy efficiency.

### ***Building a Package That Fits Your Budget***

Investing in a sustainable energy system offers long-term benefits that save you money. We can provide you with a cost analysis estimating how long until the system pays for itself. We strive to provide a system that meets your needs and fits your budget.
